

I used Claude as a guide and reviewer throughout this lab, not as a substitute for doing the work myself. I wrote my own code for each part of the lab following the assignment's TODOs, and used Claude to check my code for correctness and catch bugs, such as a duplicated API call in Part 1.1 and a mismatched few-shot example in Part 3.2. I wrote my own answers to every Student Reasoning question by directly analyzing my own outputs, quoting specific text from my actual model responses and comparing my own extraction and accuracy tables. I then asked Claude to review these answers for accuracy and consistency with my actual results, and to point out where my written explanations no longer matched output that had changed after I reran cells. I used Claude to validate everything I have done is exactly as the instructor .
